Console Cable
(Light Blue)
Router
PC0

Aim:- To configure router basic settings such as hostname, system date, system time, console password, enable password, and enable secret passwords.

Requirement : 1 router (eg. 2911), PC

Procedure

1) Open CLI
- Drag a router into workspace
- ~~the~~ Click on router
- Go to CLI tab
- Press tab

2) Enter Privileged Mode
Router > enable

3) Enter Global Configuration Mode
Router # ~~cen~~ configure terminal

4 Set Hostname
Router (config) # hostname MyRouter
Now prompt becomes:
MyRouter (config) #

5) Set Date and Time
Exit to privileged mode first:
MyRouter (config) # end.
MyRouter # clock set 10:30:00 26 March 2026
Format
clock set HH:MM:SS DAY MONTH YEAR

6) Configure Console Password
MyRouter# configure terminal
MyRouter (config) # line console 0

Date

Expt. No. Page No.

MyRouter (config-line)# password cisco
MyRouter (config-line)# login
MyRouter (config-line)# exit

7) Set Enable Password
MyRouter (config)# enable password class

8) Set Enable Secret Password (Encrypted)
MyRouter (config)# enable secret admin123

9) Save Configuration
MyRouter # write memory

Verification
- Close terminal
- Reopen terminal
- We will see:

User Access Verification
Password :
Enter : cisco

Then
MyRouter > enable
Password :
Enter : admin123

Result :- Hostname changed to MyRouter, Date & time set correctly, Console password working, Enable password & secret configured, Configuration saved.
